No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of hits satisfying chosen parameters:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-UH-531-525-13

Sequence 13, Application US/08531525

Patent No. 5840683

GENERAL INFORMATION:
APPLICANT: Hlawka, Joseph J.
APPLICANT: Pincus, Matthew R.
APPLICANT: No. 58406831e, John F.
APPLICANT: Kende, Andrew S.
ITILE OF INVENTION: Peptides Inhibiting the Oncogenic Action TITLE OF INVENTION: of P21 Ras

NUMBER OF SEQUENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSEE: Greenlee and Winner, P.C.
STREET: 5370 Manhattan Circle, Suite 201
CITY: Boulder
STATE: Colorado
                                                                                                COMPUTER READABLE FORM:
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: PolyMS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/531,525
FILING DATE: 21-SEP-1995
FILING DATE: 21-SEP-1995
CLASSIFICATION: 530
ATTORNEY/AGENT INFORMATION:
REGISTRATION NUMBER: 33,878
REFERENCE/DOCKET NUMBER: 37-94
TELECOMMUNICATION INFORMATION:
TELEPHONE: (303) 499-8080
TELEPAX: (303) 499-8080
INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 201 amino acids
TYPE: TOPOLOGY: linear
MOLECULE TYPE: Protein
MOLECULE TYPE: Protein
MYPOTHETICAL: NO
ORIGINAL SOURCE:
ORGANISM: Discopyge ommata
                                                                              US-08-531-525-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 1

Title: Perfect score: Sequence:

OM protein -

protein search, using sw

on:

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Total number of hits satisfying chosen parameters:

417779 seqs, 108206813 residues

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-820-003B-2

; GENERAL INFORMATION:
APPLICANT: MERKULOV, Gennady et al.
FITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001196
CURRENT APPLICATION NUMBER: US/09/820,003A
CURRENT FILIG DATE: 2001-03-29
NUMBER OF SEQ ID NOS: 39
SOFTWARE: FRASISEQ for Windows Version 4.0
LENGTH: 173

Patent No. US20020019020A1

GENERAL INFORMATION:
APPLICANT: Rhodes, Kenneth
APPLICANT: AND Wengian

TITLE OF INVENTION: METHODS FOR TREATING CARDIOVASCULAR DISORDERS
FILE REFERENCE: MNI-059
CURRENT APPLICATION NUMBER: US/09/350,874
CURRENT FILING DATE: 1999-07-09
EARLIER APPLICATION NUMBER: USSN 60/110,277
EARLIER FILING DATE: 1998-11-30
EARLIER APPLICATION NUMBER: USSN 60/110,033
EARLIER APPLICATION NUMBER: USSN 60/109,333
EARLIER APPLICATION NUMBER: USSN 60/109,333
EARLIER APPLICATION NUMBER: USSN 60/109,333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4, Application US/09972529

Patent No. US20020150916A1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 36, Application US/09820003A
PRICENT NO. US20020142382A1
GENERAL INFORMATION:
APPLICANT: MERKULOY, Gennady et al.
TITLE OF INVENTION: SOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001196
CURRENT APPLICATION NUMBER: US/09/820,003A
CURRENT FILING DATE: 2001-03-29
NUMBER OF SEQ ID MOS: 39
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 36
LENGTH: 601

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
